IPPC Ledger

IPPC Ledger keeps timber deliveries, supplier and treatment evidence, open gaps and your packaging jobs in one place. For every job you can show where the timber came from, how it was treated and which documents support it.

Who it is for

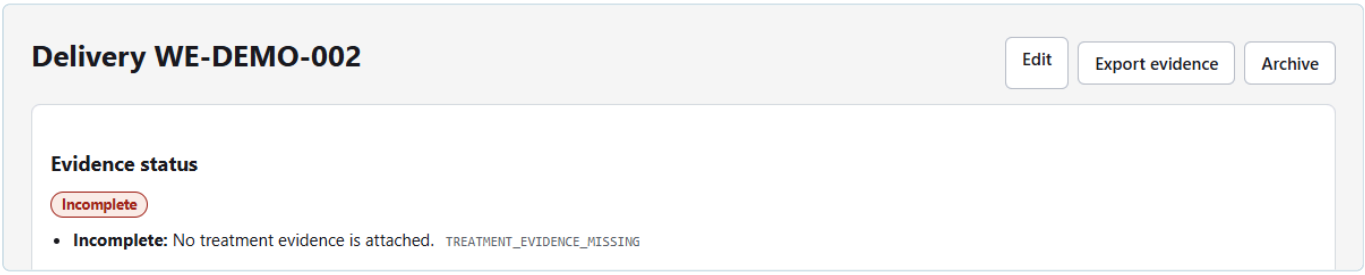

Companies that make or repair wooden packaging and buy in already-treated timber: crate makers, pallet makers, packing services. IPPC Ledger is a tool for your own records. It is not an authority, does not replace an official registration or certification and does not guarantee compliance.

How you work with it

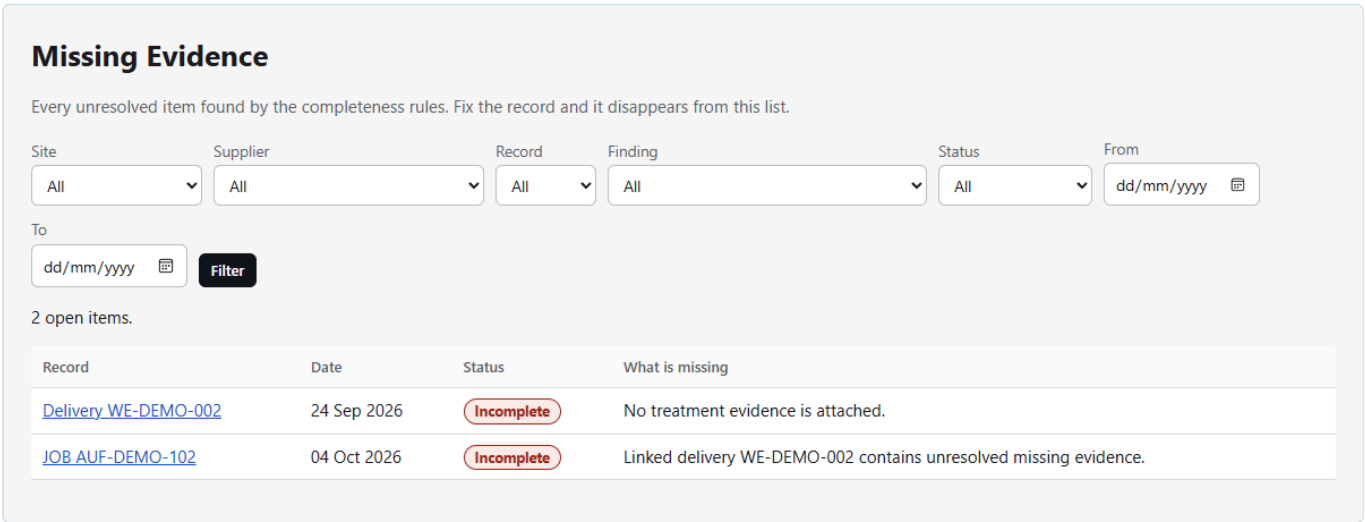

1. **Add suppliers** with authorisation number, authority, validity and document.
2. **Record deliveries** material, quantity and treatment details of each delivery.
3. **Attach evidence** delivery note, invoice and treatment certificate as original files.
4. **See the gaps** every missing or conflicting detail is shown with its reason.
5. **Link jobs** which material from which delivery went into which job.
6. **Review and export** check the records and produce an evidence export for your customer.

What it looks like

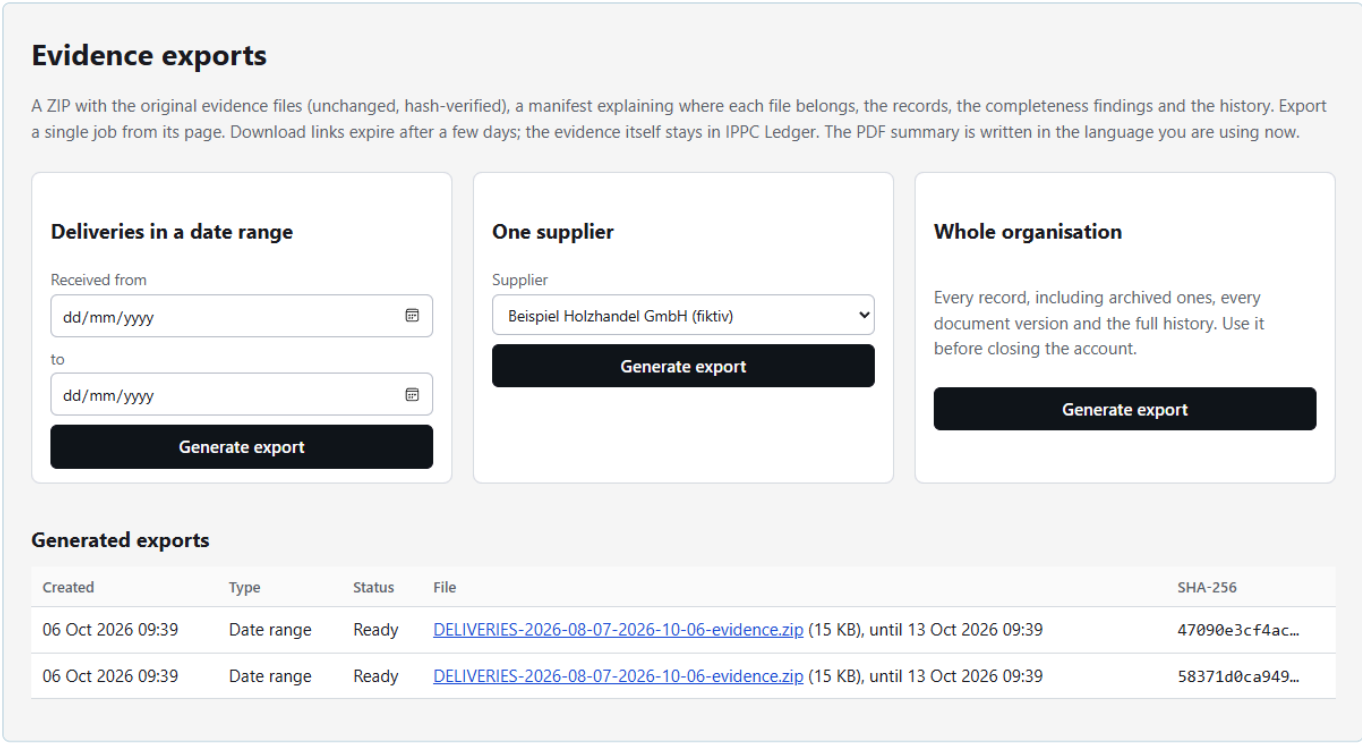

Screens from the application with invented example data.

A delivery is incomplete: the treatment certificate is missing, with the reason.

“Missing evidence” lists every open gap across deliveries and jobs.

Export for a job, a supplier or a period.

Status and limits

- Live: suppliers and authorisations, deliveries with original evidence, jobs with traceability, completeness checks with reasons, review notes, export, German and English.
- Preview, not live yet: requesting documents directly from a supplier.
- “Complete” means no rule found a gap. It is not a legal assessment. A person matches files, not the software.

Pilot

IPPC Ledger is in its pilot phase and not generally available yet. A pilot covers one site and your own deliveries and jobs and is non-binding. Terms after the pilot are discussed openly with you.
